Incidence of malignant neoplasms has a continuous and ubiquitous growth.

Purpose of the study: Study of the dynamics of morbidity and mortality from malignant neoplasms in the Republic of North Ossetia-Alania (RNO-Alania).
Materials and methods: Forms No. 7, No. 35, No. 5 (Table No. C51), Table 2 PH.
Results: For 25 years in the Republican Oncology Dispensary, 45,498 patients were on treatment. Men - 20720 ( $45.5 \%$ ), women $24778(54.5 \%)$. The average age of patients was 63.2 ( 63.1 for men, 63.4 for women). Up to 14 years of the male sex $-0.9 \%, 15-29$ years $-1.7 \%, 30-44$ years $-5.8 \%, 45-59$ years $-24.8 \%, 60-74$ years $-47.9 \%$ And $\geq 75$ years - $18.9 \%$. In the able-bodied age - $44.5 \%$ and pension $-56.4 \%$. Up to 14 years of the female sex - $0.6 \%, 15-29$ years $-1.8 \%, 30-44$ years $-5.8 \%, 45-59$ years $-25.2 \%, 60-74$ years $-40.7 \%$ And $\geq 75$ years $-23.1 \%$. In working age $-25.4 \%$ and pension $-74.0 \%$. The sex of children under the age of 14 is $0.7 \%$, $15-29$ is $1.7 \%, 30-44$ is $7.4 \%, 45-59$ is $25.0 \%, 60-74$ is $44.0 \%$ And $\geq 75$ years $-21.2 \%$.

The standardized indicator (world standard) of incidence for the entire follow-up period averaged 165.9 (men - 201.1 and women - 160.7) per 100000 population. The averaged 5-year figures were in 1990-1994. - 142.9 (men - 167.4, women - 129.4); 1995-1999 -158.4 (men - 184.4, women - 145.9); 2000-2004-168.3 (men-194.5, women-156.1); 2005-2009-187.9 (men - 212.5, women -178.1); 2010-2014-207.7 (men -246.6, women - 193.9) per 100000 population.

The number of deaths was 27403 . Men $-45.1 \%$ and women $-54.9 \%$. The average age of the deceased was 59.1 (men 59.2 , women 58.6). Up to 14 years of the male sex - $1.5 \%, 15-29$ years $-2.8 \%, 30-44$ years $-9.3 \%, 45-59$ years - $34.2 \%, 60-74$ years $38.0 \%$ And $\geq 75$ years $-14.1 \%$. Up to 14 years of the female sex $-1.0 \%, 15-29$ years $-2.8 \%, 30-44$ years - $13.8 \%, 45-59$ years $34.3 \%, 60-74$ years $-34.5 \%$ And $\geq 75$ years - $13.6 \%$. In working age - $37.8 \%$ and pension $-61.2 \%$. For both sexes, up to 14 years of age - $1.2 \%, 15-29$ years $-2.8 \%, 30-44$ years - $11.8 \%, 45-59$ years - $34.2 \%, 60-74$ years - $36.1 \%$ And $\geq 75$ years - $13.9 \%$.

The standardized death rate averages 124.4 (men - 135.4 and women - 121.6) per 100000 population. Averaged five-year mortality rates in 1990-1994.- 128.3 (men - 145.1, women - 121.1); 1995-1999-119.9 (men - 131.8, women - 115.3); 2000-2004 - 125.4 (men - 136.7, women-121.2); 2005-2009-122.7 (men - 133.8, women-120.9); 2010-2014-128.2 (men - 125.6, women - 129.5) per 100000 population. Mortality does not tend to decrease.

Conclusion: Morbidity of malignant neoplasms is growing. Mortality does not decrease.
