
Current Concepts in Clinical Management of Patients with Specialized Healthcare Needs

Robert Frare

New York University College of Dentistry, USA

According to the World Health Organization, about 15% of the world's population lives with some form of disability. Dental patients will present with chronic medical conditions such as cardiovascular disease, diabetes, Alzheimer's disease, head and neck cancer, and developmental disabilities such as Autistic Spectrum Disorder and Down syndrome.

Dental providers must be prepared to meet the needs of the changing demographics of our patient population.

Biography:

Dr. Robert William Frare is a graduate of Tufts University School of Dental Medicine. His post graduate training includes a Fellowship for Developmentally Disabled Individuals at Stony Brook University School of Dental Medicine, General Practice Residencies with the Veterans Administration Hudson Valley Health Care System and Lutheran Medical Center in Brooklyn New York. He has been a Clinical Assistant Professor in the Department of Restorative Dentistry at Rutgers School of Dental Medicine, an Adjunct Clinical Instructor in the Departments of Pediatric Dentistry and Community Oral Health Sciences at Temple University Kornberg School of Dentistry, and is currently a full time Clinical Educator at New York University College of Dentistry in the Department of Oral & Maxillofacial Pathology, Radiology, & Medicine. He is an Editorial Board Member for multiple dental journals, a published author in a peer-reviewed Dental Journal, member of the Medical Reserve Corps, an associate in a pediatric dental practice, and maintains a private practice in the USA.
