Patient Satisfaction: Comparative Study between Joint Commission International Accredited and Non-accredited Palestinian Hospitals

Eba'a Dasan Barghouthi^{1*} and Asma Imam²

¹Istishari Arab Hospital, Palestine

²University of Al-Quds, Palestine

Patient satisfaction is one of the important indicators in the health system that should be considered when evaluating the quality of health services provided and the impact of accreditation systems. This study aims to assess the level of patient satisfaction in accredited and non-accredited hospitals in Palestine. Cross-sectional design used to compare patient satisfaction in Palestinian hospitals. The researcher measured the patient satisfaction between October and November 2016 using the SERVQUAL tool to assess five dimensions of quality. The sample size included was 332 inpatients, who were recruited by the researcher through convenient sampling method and the data was analyzed using SPSS version 18.

The patients have a high level of satisfaction with a total mean of (4.34) out of 5 points and a (0.70) standard deviation. The patients have a high level of satisfaction regarding each patient's satisfaction dimensions with the quality of services provided in the two hospitals. The results indicated that there are statistically significant differences at the level ($P \leq 0.05$) between the means of patient satisfaction relating to patient characteristics (with the exception of gender) and indicated that there are no statistically significant differences related to hospital characteristics. The study indicated that there are no significant differences between the means of patient satisfaction attributed to accreditation status. The results reinforce that the patient perspective should also be given much importance in the health system and certifies that it should be taken into consideration to ensure the quality of services provided by healthcare organizations.

Biography:

Eba'a Dasan Barghouthi has completed his BA of Nursing from Al-Zaytoonah University of Jordan and Post Graduate Diploma in Healthcare Quality Management from the German Jordan University at the age of 27 years, Master of Policies and Health Management at the age of 31 years from Al Quds University.
